

# ADOLESCENT PARTICIPANTS NEEDED

# UCL

## WHAT IS THIS STUDY ABOUT?

- A new questionnaire called The Spider has been developed to explore how symptomatic hypermobility affects your daily life.

- The scores are plotted on a spiderweb so we can easily see what symptoms trouble you the most so we can consider all of these important issues in your care.
- To be able to use the Spider routinely in your care we must check it measures what it is supposed to.

## WHAT DO I NEED TO DO?

- You will complete several questionnaires online taking 15-20 minutes in your own time, in your own home.
- The questions will ask you about how symptoms like pain, tiredness, emotions, tummy problems etc impact your daily life.
- Responses are completely anonymous.

## CAN I HELP?

- We are looking for adolescents aged 13 to 18 years with:
- **Symptomatic hypermobility**, but without another diagnosis like arthritis, neurological conditions, unrelated joint, muscle or heart problems.
- But we also need teenagers **without generalised joint hypermobility** (eg your friends and siblings).
- And be able to understand and communicate in English.

## INTERESTED?
